Himanshu K Mahesh

AI Engineer + Product Designer

Bengaluru, Karnataka
+91 99728 35911
himanshukm1109@gmail.com
in/himanshumahesh
HimanshuMahesh

Education

Dayananda Sagar Academy of Technology and Management
B.E. Computer Science and Engineering
2022 – 2026 · CGPA **9.0/10.0**

Deeksha PU College
Pre-University, Science
2020 – 2022 · **92%**

Skills

AI ENGINEERING
Agent orchestration, multi-agent systems, RAG, tool calling, eval harnesses, prompt & context design, human-in-the-loop UX

AI & AGENTS
LangGraph, CrewAI, LangChain, LlamaIndex, MCP, Claude Skills

LANGUAGES
Python, TypeScript, JavaScript, SQL, Bash

WEB & APIS
React, Next.js, Node.js, FastAPI, REST, WebSockets, Tailwind

DATA & RETRIEVAL
PostgreSQL, pgvector, Redis, Pandas, NumPy

INFRA & TOOLING
Docker, Git, GitHub Actions, CI/CD, Azure, Linux

ENGINEERING PRACTICE
System design, API design, testing, observability, code review

DESIGN
Figma, Motion, design systems

WORKING STYLE
Clear writing, asking the right questions, taking feedback, cross-functional collaboration, end-to-end ownership

Experience

Tavant · AI Engineer Intern — Jan 2026 – Jul 2026
Enterprise AI platform engineering · Bengaluru

- Built roughly **40 production agents** across data science automation and Ad Ops.
- Building an **agent builder** that ships as part of the Tavant platform: a **Claude Code plugin** that turns a spec into a production-ready agent, with tools, evals, and guardrails wired in from the start instead of bolted on afterwards.
- Wrote **MCP servers** so agents could reach internal tools through one interface, and built **eval harnesses** to test agent behaviour before release instead of spot-checking outputs by hand.
- Ran **closing studies on the latest AI technology**: new model releases, agent frameworks, and emerging protocols. Benchmarked what actually holds up in production and turned it into recommendations the team builds on.

Spacered · Designer — Jan 2026 – Jul 2026
Design studio working with Ola Electric, TripleSpeed, and Cortekz across SaaS and deeptech.
spacered.studio

- Set up the studio's positioning, service structure, and visual identity system.
- Built a **10-agent internal stack** covering the full client lifecycle, from lead intake and proposals through delivery, invoicing, and case studies, so output does not scale linearly with headcount.

GridRnD · Early Team Member — Feb 2025 – May 2026
Early-stage product studio · shipped TaskLearn and Visume from zero to real users

- Joined early on two products and carried both to launch: **TaskLearn**, an AI learning platform now at **10,000+ learners**, and **Visume**, an AI video-interview screener with **1000+ interviews taken**.
- Owned product design and user flows across both, and worked the stack as a generalist wherever something needed building: frontend, candidate scoring logic, and the AI interview experience itself.

Projects

TaskLearn · AI learning platform — tasklearn.app
Built around one loop: do real work, earn skill badges, get hired. Owned product design and user flows and built across the stack; now at **10,000+ learners**.

Visume · AI interview screening — visume.co.in
Replaces resume screening with a five-minute AI interview any applicant can take. Built the frontend, the candidate scoring logic, and the interview experience itself: how questions are served, how responses are captured, and what the candidate sits through. **1000+ interviews taken**.

Achievements

IEEE National Hackathon · Winner — Nov 2024
Led a team of four to first place against **200+ participants** with a blockchain-AI system.

InvokED 4.0 National Hackathon · Finalist — Mar 2025 · National
Top **12 of 1000+** registered teams, for tooling aimed at educators.

Beyond Engineering

Digital artist. I do event design and branding, plus album art for independent artists. Off the clock I am an **avid reader**, deep in **movies and pop culture**, and a **Formula 1** regular. I also do a fair amount of **internet archiving**, and I **travel** whenever I can.

I work as a generalist across design, engineering, and product. I learn fast, I take ownership of what I build, and I love doing it. I would rather carry something all the way to shipped than hand it off halfway.
